Mining and Metals ISAC is a global, not-for-profit industry Information Sharing and Analysis Centre (ISAC) for the global mining and metals industry. Our goal is to improve the cyber resiliency of the mining industry.

MM-ISAC CYBER SECURITY READINESS RATING

GUIDE TO GETTING STARTED

Welcome to the program. Only a couple steps rest between you and your rating.

- 1 You will receive an email invitation to fill out the customized questionnaire.
- 2 Once submitted, this is what is taking place in the background:
 - We use the SecurityScorecard software platform to establish an external view of your company's risk and security posture. SecurityScorecard leverages the open-source intelligence (OSINT) framework to discover indicators of your security maturity.
 - Based on a custom developed risk assessment framework an automated workflow kicks off which analyzes your vendor persona, maps them to relevant risks and then generates a list of highly relevant questions, hosted on SecurityScorecard's Atlas platform. You don't need to know which persona you are being assessed against — you only see the set of questions right for you, which results in less effort and higher accuracy.
 - The automated data from the first step is combined with findings and evidence from the questionnaire, which are then meticulously reviewed by Mirai's risk analysis team. Submitted answers are assessed against industry leading practices and rated against the capability maturity model. A tentative rating will be shared with you to review to ensure accuracy prior to finalizing your Readiness Rating.
 - A Cyber Security Readiness Rating is produced that summarizes your security posture. The rating is shared with all MM-ISAC members but the full report is sent to you alone — for you to share with whoever you wish. The solution allows a vendor to submit once through the MM-ISAC rather than to each client. This reduces the friction between seller and buyer and provides MM-ISAC members with the confidence that the first review of a supplier is sound.
- 3 Once completed, you will receive an assessment report and your MM-ISAC Cyber Security Readiness Rating Scorecard.
- 4 Scorecards are shared with other MM-ISAC members. You will be given the opportunity to review your assessment report and scorecard before it is shared.

There is the opportunity to work with the MM-ISAC team to help improve your score.
